Infection Prevention & Control

T. +44 (0) 7759 151276

1 in 10 patients gets an infection while receiving care

Up to 32% of surgical patients get a post-operative infection.

50–70% of injections given in developing countries are unsafe.

*The stats say it all. We're **not doing enough to prevent and control infection.** But ETD's Infection Prevention and Control course can show your team how to protect themselves and others in the workplace.*

Infection control and prevention Humans contract infections and diseases when harmful germs (pathogens/pathogenic micro-organisms) enter the body and multiply. These micro-organisms are so small they can only be seen under a microscope.

Who is this training for?

This course provides teams with the knowledge and skills needed to reduce the spread of infection in healthcare and non-healthcare workplaces. The training is ideal for both private and public sectors, especially for organisations operating in the healthcare market.

What does the course cover?

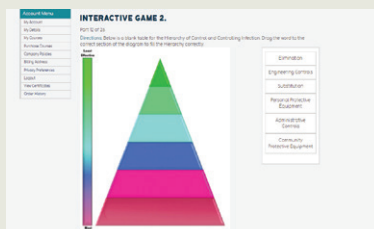

The course delves into the principles of infection prevention and the importance of personal hygiene. The training also covers how to use different types of personal protective equipment (PPE) correctly and safely.

What is the benefit to your business?

This course will offer your staff quick and effective infection prevention and control training to keep everyone in your workplace safe.

Video Presentations.

Interactive games.

Final exam - certificates provided.
